POWERFLUSHING

Power up your heating system ahead of winter

By removing sludge, rust, and debris, a power flush restores the system's ability to circulate water and transfer heat efficiently, leading to warmer homes and lower heating costs. Inhibitor will be supplied.

Power flushing offers several benefits for central heating systems, including:

- Improved efficiency
- Reduced energy bills
- Faster heating
- Quieter system
- Reduced risk of leaks

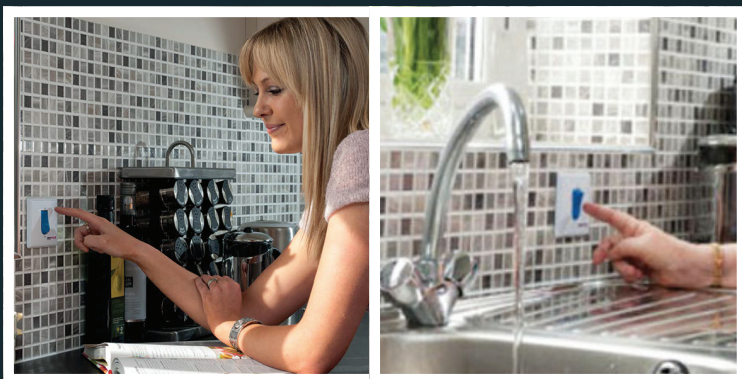

"I am so impressed with the powerflush that has been carried out at my property, everything was left clean and tidy, please pass my thanks on to the engineer I am so happy with the outcome." - SS11

PRICE: FROM £624 INC VAT

All of our powerflushes come with a FREE filter worth over £100 and a 5 Year Guarantee!

Positive Head Systems

A positive head system exists when sufficient pressure is available under gravity to provide a flow at the outlet. Typically, a positive head condition exists where the flow from the outlet is more than 1 litre/min.

Negative Head Systems

A negative head system exists where there is inadequate pressure or head of water under gravity to provide sufficient flow at the outlet. Typically, a negative head condition exists where the flow from the outlet is less than 1 litre/min.

Universal Pumps

Operate in positive or negative head conditions and do not require gravity flow to start, incorporating both a pressure and flow switch. The pump starts automatically when the pressure switch detects a drop in pressure when an outlet opens. The flow switch keeps the pump running whilst there is sufficient flow of water. When the flow stops, the pump continues to run for 3 seconds allowing the system to repressurise.

ANTI BACK-FLOW AND RODENT BARRIER VALVE

This anti back-flow and rodent barrier valve for the toilet fits easily to the waste pipe or the drain outlet. This means immediately after flushing the flap closes to prevent rats or other unwanted guests coming into your toilet'

UNVENTED HOT WATER CYLINDER SERVICING

Why is cylinder servicing important?

Safety: Unvented cylinders, which are directly connected to the mains water supply, can be at risk of pressure buildup and potential leaks or explosions if not properly maintained.

Efficiency: A well-maintained cylinder ensures efficient hot water heating, reducing energy consumption and costs.

Longevity: Regular servicing helps prevent costly repairs and extends the lifespan of your cylinder.

Warranty: Many manufacturers require annual servicing to maintain your cylinder's warranty.

What's included?

- Checks of all safety components and parts
- Expansion vessel recharge to correct pressure
- Visual health check of cylinder

ANNUAL SERVICE: £120

WWW.DYNOPLUMBINGKENT.CO.UK

Product enquiries:  **0208 768 4863**

WOULD YOU LIKE TO CLEAN YOUR TEETH WITH THIS WATER?

Take a look at the photographs, a selection of recent but all too common situations from which you may be able to gauge if you have a problem.

Typically we come across the following in loft tanks;

- ✓ WASPS
- ✓ RATS
- ✓ SPIDERS
- ✓ BIRDS
- ✓ MICE
- ✓ THE ODD BAT

TANK CLEAN PRICES FROM **£199 INC VAT**

Why not upgrade with a **Byelaw Kit** to provide extra protection on your system – please ask your engineer for quotation.

10%
SUMMER
DISCOUNTS

STAY SAFE

The main contaminants of loft tanks are limescale and general debris which can prove a health hazard.

Considering this is drinking and washing water, it pays just to check.

HOUSE PURCHASE SURVEYS

FROM
£345

We can provide

Simple buyers summary, findings and recommendations, industry standard report, video and photo evidence, diagram of drain layout.

Top Benefits

- **Identify Hidden Damage:** A specialist CCTV camera identifies defects that standard property surveys miss—such as fractured pipes, corrosion, and misaligned joints—before they cause leaks or subsidence.
- **Avoid Surprise Repair Costs:** Repairing major drainage issues can cost thousands. Discovering these problems beforehand lets you request that the seller fixes them or negotiates a discount on the property price.
- **Clarify Ownership and Liability:** Surveys map out the drainage system and determine exactly which pipes are your responsibility and which fall under the local water authority or neighbour's property.
- **Support Insurance Claims:** Many home insurers require a drain survey report before they will accept future claims regarding pipework. Having a pre-purchase report proves the system's baseline condition.
- **Peace of Mind:** Provides absolute clarity on the structural integrity of the home's plumbing, ensuring the long-term functionality of the property.

Bad Odours from your Drainage System?

Persistent foul odours from your drains usually mean waste is trapped or sewer gases are leaking into your property. A Look See CCTV drain survey in your external drainage (camera look-see) is the most effective way to identify the exact underground cause, which can range from cracked pipes and tree roots to heavy grease buildup and collapsed drains.

£180

GUTTER CLEANING

Our skilled engineers use the specialist equipment to reach up to clean and clear gutters so no scaffolding is usually required and our gutter cam can show the client at ground level what is happening high above.

If you're looking for repairs on gutters our engineers can report back on the most cost efficient manner and this can involve, should you wish, Roof and/or Scaffolding prices

Areas available for drain guttering: **Essex**

Our skilled engineer will provide you a quotation on assessment

***Cleaning only** - Gutter leaks and repairs are not included
